Education

Masters of Data Science

University of British Columbia
2017 – 2018

Bachelor of Physical and Engineering Science

University of Guelph
2013 – 2017

Graduated top of my cohort.
(1/~4000).

Community Work

Lady Tides

Independent App Developer

2026

Created a design forward menstrual cycle tracking application. Available on the App Store 

The Prevention Project

2024

Collaborated with non-profit Ally Global  to build The Prevention Project, a web application that hosts trafficking prevention resources and videos.

Skills

- Technical communication
- API development
- Project management
- Mentorship

Profile

5+ years experience building software systems in fast, lean teams. I scope complex business challenges into solvable software problems, and lead teams to build them.

I specialize in building backend systems and public API's, and am passionate about building all kinds of tools.

Experience

Backend Software Engineer

Word of Mouth (a16z)

2025 – 05/2026 | Remote, Los Angeles, USA

WOM is on a mission to build the world's largest taste graph. Users scan their receipts, leave reviews and collect points, while we generate a large data asset of verified reviews.

- As part of the a16z speedrun (006), I built and owned the Backend for Frontend API for our mobile and web applications.
- I selected the tech stack, designed the database schema, set up CI and built the service from the ground up.
- I led technical planning across all internal services to produce a unified API which exposed all business logic, from receipt scanning, to processing payments, and user management.

Python, Flask, PostgreSQL, Alembic, Pydantic, AWS, Github Actions

Software Engineer

Lune 

2022 – 2025 | Remote, London, UK

Lune provides best in class carbon emission tracking to Logistics companies in the EU.

I worked on many projects across our suite of applications in my 4 years here. Some highlights:

- Aggregated three React dashboard applications and a UI component library into a monorepo.
- Built an automated usage based building solution for our B2B API (using Lago).
- Integrated live vessel tracking data into our product, requiring the intake of 38GB of vessel position logs daily.

TypeScript, Node.js, PostgreSQL, OpenAPI, React, Next.js, Playwright, Stripe

Software Engineering Instructor

Codeworks

2021 – 2022 | Barcelona, Spain

Lectured 80+ students on computer science fundamentals and modern full stack development practices. Designed and recorded a 6 lecture series on the evolution of front-end frameworks still in use today.

Data Scientist

2018 – 2020

Early career building automated reports, dashboards, and data visualization applications for a range of start-ups. (R, python, SQL)
