PROFILE

Product focused Software Engineer with 5+ years experience at early stage startups. Specialized in building backend systems and APIs. I lead teams, projects, and bring my passion for building software solutions to ambitious important work.

EXPERIENCE

- | | | |
|-------------|--|--------------------------|
| 2025 – 2026 | Software Engineer, Word of Mouth (a16z)
Led the development of the company's Backend for Frontend (BFF) API from the ground up. As the sole engineer on the service, I selected the tech stack, designed the system, and collaborated extensively with internal teams to deliver a unified API for our mobile and web clients. <ul style="list-style-type: none">Designed the database schema and migration strategy (Alembic)Led technical planning across Wallet, Receipt OCR, and Restaurant Pipeline teams to ensure quality while operating at a16z speedrun velocity.Configured automated testing via GitHub Actions and maintained robust coverage. Python, Flask, SQLAlchemy, PostgreSQL, Alembic, Pydantic, AWS (Cognito, S3), Github Actions, pytest | Remote, Los Angeles, USA |
| 2022 – 2025 | Software Engineer, Lune 
Grew from Junior to Senior Software Engineer over 3.5 years at Lune, an enterprise API for EU certified carbon emissions tracking. Led small engineering teams on high impact projects: <ul style="list-style-type: none">Led the integration of live vessel tracking data (AIS) into the product as a response to a sustained rise in global trade route instability (Red Sea shipping crisis, Suez canal closure)Integrated a usage based billing solution for our API product, configured payment tiers, free trials, and wrote extensive documentation on the system's expected behaviour.Added a vector database (Typesense) to enable semantic search capabilities on our public emission factor database.Wrote technical blog posts  demystifying our calculation methodology, building trust in an industry where transparency is critical. TypeScript, Node.js, PostgreSQL, OpenAPI, React, Next.js, Jest, Playwright, Lago, Stripe | Remote, London, UK |
| 2021 – 2022 | Software Engineering Instructor, Codeworks
Lectured 80+ students on computer science fundamentals and modern full stack development practices. Designed and recorded a 6 lecture series on Front-End Frameworks | Barcelona, Spain |
| 2018 – 2020 | Data Scientist
Early career building automated reports, dashboards, and data visualization applications for a range of start-ups. | |

EDUCATION

- | | |
|-------------|---|
| 2017 – 2018 | University of British Columbia, Masters of Data Science |
| 2013 – 2017 | University of Guelph, Bachelor of Physical and Engineering Science
Graduated at the top of my cohort (1/~4000). |

COMMUNITY WORK

- | | |
|------|--|
| 2026 | Lady Tides, Solo App Developer
Built and shipped a design forward menstrual cycle tracking application. Available on the App Store  |
| 2024 | The Prevention Project
Collaborated with non-profit Ally Global  to build The Prevention Project, a web application that hosts trafficking prevention resources and videos. |
